

# Pellet Hut

## Q-Team Bulk Wood Pellet Storage System

Advantages of the **Pellet Hut** over traditional 40 lb. bagged pellets:

- No more weekends spent hauling pallets of pellets home from the hardware store (go fishing instead).
- No more broken leaf springs on your truck or trailer (or your brother-in-law's).
- No more handling heavy 40 lb. bags of pellets (simply fill up a pail to your desired level/weight).
- No more plastic bags to dispose of.

**Pellet Hut Info:**

- Capacity 3± tons.
- Dimensions: Diameter 68", Height 76" (plus the height of the platform used to elevate the hut – a typical platform would be a 68" wide circle (or square) constructed of ¾" plywood, and elevated by cement blocks. The blocks could be positioned horizontally or vertically, based on your ceiling height and the height of the pail you intend to use. Note: The bottom of the pour spout is located 2" above the floor of the **Pellet Hut**).
- Mount it in your basement, shed or garage.
- It has a zippered door for easy access for coaxing the bottom pellets into the pour-spout, once you've lost gravity flow.
- Bulk pellets are **much** more convenient than bagged pellets, but very close in price.
- The **Pellet Hut** can be piped in for easy fill by a bulk delivery truck.
- A limited supply of Pellet Huts are in stock and available now (first come, first serve).

**Pellet Hut Approximate Pricing (for basic basement install)**

<b>Pellet Hut</b> 3-ton bulk pellet storage container:	\$ 199*
Installation kit:	\$ 350*
Installation by us (for basic basement install):	\$ 600
Total:	\$1,149*

\* Plus sales tax.

- Options:
1. Purchase a **Pellet Hut** and an Install Kit and do-it-yourself.
  2. Have us install your **Pellet Hut**.

Notice: System must be grounded to protect against static electricity.

## Pellet Fuel Info:

Premium **Maine-Made Bulk Pellet** delivery is readily available by delivery trucks, which are equipped with certified onboard scales. We will help you in setting up your bulk deliveries of pellets that are an approximate 50-50 mix of hardwood & softwood. In an effort to boost the local economy, we only promote **Maine-Made Pellets**. We do not promote out-of-state or Canadian pellets.

Wood Pellet Advantages (as compared to fossil fuels like oil, propane and natural gas):

- Pellets are a renewable energy.
- Pellets are low-carbon energy, thus a good way to reduce your carbon footprint.
- Pellets are local, thus helping to stimulate many segments of the local economy.
- Pellets are clean. Modern wood pellet stoves, boilers and furnaces are very clean burning.

You can feel good about using wood pellets to heat your home or business.

Note the fill/vent-connectors installed just above the foundation for easy delivery.

A **Pellet Hut** installed in a basement and filled from outside fill-connectors (see previous photo) with approx. 3 tons of clean renewable Maine wood pellets: Pail ready, and the pellet stove is 10 feet away. These folks are enjoying “easy pellet” winters.
